

## Four-leaf clover Spirits

The two robots are mainly made of non-woven fabric and cotton sewn together.

## Maker Space Element(3D Print)

The base is 3D printed with a circular module, and a motor is used to move the upper and lower discs to lift it.

## Theme

It is a story from Can This Love Be Translated? We use a four-leaf clover to represent the core of the drama in our design.

## Extra Moving parts (motor)

- Each robot has 3 motors.
- Two motors at the front of the vehicle control the movement of the hands. Each character's hand has a guide rope sewn onto it and connected to the motor, thus driving the hand's movement.
- A motor on the robot's base controls the up-and-down movement of its entire body.
